Services

New York Behavioral Health treats individuals and groups in the following areas: addictions, anger, anxiety, binge eating, bulimia, compulsions, depression, grief, OCD, procrastination, relationships, and weight loss.

Individual Psychotherapy

One-on-one psychotherapy provides clients with customized strategies to quickly address time-urgent problems. Longer term issues are also addressed with cognitive behavioral therapy and other appropriate techniques. This approach aims to create long-lasting improvement by teaching clients techniques to manage existing issues as well as to navigate future challenges on their own. Clients will capitalize on existing strengths, while learning new coping skills to overcome challenges and increase their satisfaction with life.

Couples Counseling

Couples meet with a psychotherapist to identify the strengths and weaknesses of each individual and how this interaction contributes to relationship problems, as well as the positive aspects of the relationship. A collaborative approach is used to overcome barriers and enhance overall satisfaction with the relationship as well as each individual's approach to life.

Group Psychotherapy

A safe group environment allows for numerous dynamics to be used for individual growth. The group context allows natural patterns to emerge that members and the leader can use to better understand and address interpersonal and intrapersonal issues.
